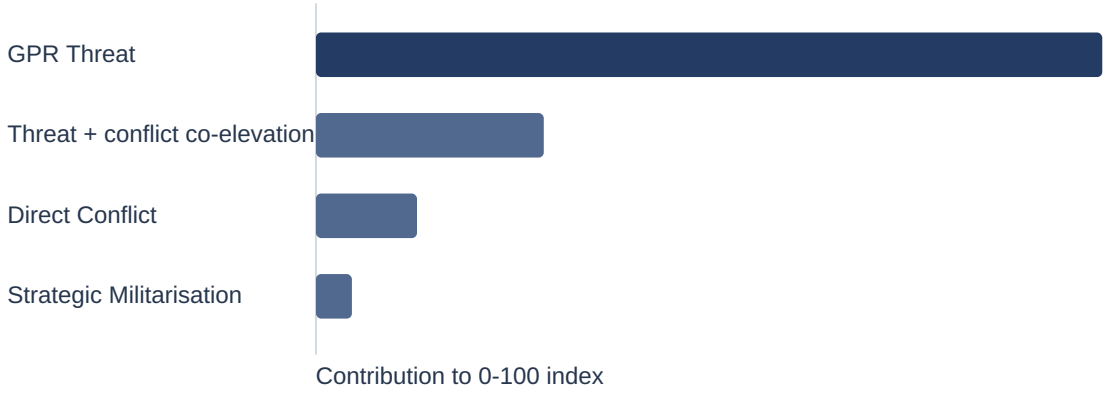
CURRENT DRIVER DECOMPOSITION

Four visible contributions sum to the latest validated reading



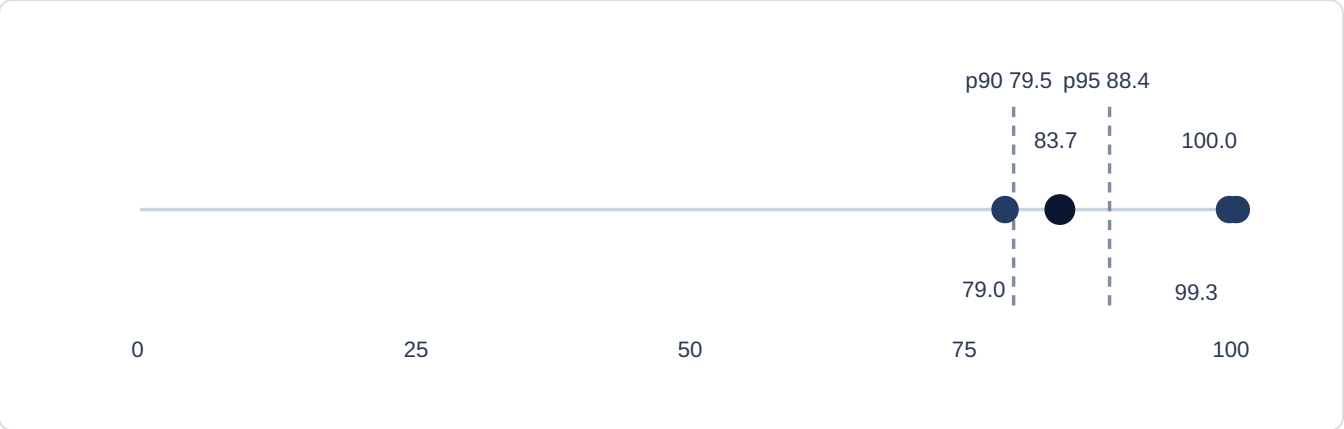
COMPONENT	INPUT	DATE / VINTAGE	CONTRIBUTION
GPR Threat Acute geopolitical-threat environment	**90.45**	31 Aug 2026 score input GPR freshness through 13 Oct 2026	**57.24**
Direct Conflict Realised interstate conflict intensity	**75.26**	31 Aug 2026	**7.33**
Co-elevation Concurrent high threat and conflict	-	Derived interaction	**16.57**
Strategic Militarisation Slow P5 structural backdrop	**26.47**	2024 observation	**2.65**

The co-elevation term records concurrent geopolitical threat and conflict. It is not a claim that one caused the other.

SAMPLE REVISED 14 OCTOBER 2026 - validated score 83.7 / Severe.

HISTORICAL POSITION

83.7 is severe and historically unusual, but not unprecedented



The approved history contains **6,087 complete daily observations** from 1 January 2010 to 31 August 2026. Later dates remain incomplete and are not plotted or carried forward.

The latest 83.7 reading sits above the historical p90 threshold. Earlier extreme periods include the opening phase of Russia's full-scale invasion of Ukraine in February 2022 and the June 2025 Iran-Israel episode, both of which reached the extreme end of the public scale.

DATE	REFERENCE POINT	WW3RISK	BAND
15 Jun 2020	China-India reference point	**79.0**	Elevated
25 Feb 2022	Russia-Ukraine reference point	**100.0**	Extreme
14 Jun 2025	Iran-Israel reference point	**99.3**	Extreme
31 Aug 2026	Latest complete observation	**83.7**	Severe

SAMPLE REVISED 14 OCTOBER 2026 - validated score 83.7 / Severe.
